SUMMARY

Senior software engineer with 10+ years building cloud infrastructure, microservices, and reliability systems. Currently lead a team at TikTok supporting content moderation pipelines, availability and performance tooling, and cost optimization for cloud infrastructure. Previously led cloud migration pipelines and platform engineering at Deloitte and a developer portal serving 800+ users at GE Healthcare. Experienced leading Scrum teams in Agile environments of different sizes across various industries.

EXPERIENCE

TikTok, Seattle, WA — Sep 2023 – Present
Senior Software Engineer

- Lead a team of 7 engineers supporting content moderation pipelines across various content types, handling over 2B+ videos per day.
- Designed and built availability and performance systems for production services, and disaster recovery failovers improving reliability and stability.
- Built a capacity allocation and cost-optimization service for 1K+ compute instances, reducing infrastructure spend by 3M+ annually.
- Developed an alarm handling and management system for production applications, cutting alert noise by 35% and mean time to resolution by over 100%.

  Tech: Go, Node.js, TypeScript, SQL, RDS, Redis, Eventbus, Hertz, Kitex, LLM

Deloitte, Seattle, WA — Jan 2021 – Aug 2023
Senior Software Engineer

- Led cloud suitability assessments and migration strategy for 3 client applications on AWS, defining migration patterns adopted across 10+ engagements.
- Led a team of 4 engineers building infrastructure monitoring for compute instances running client web applications, covering 120+ instances.
- Built a platform for developing and deploying containerized, cloud-native web applications across AWS and GCP, reducing deployment time over 50%.

  Tech: AWS, GCP, Terraform, Python, Kubernetes

GE Healthcare, Seattle, WA — Dec 2017 – Oct 2020
Senior Software Engineer

- Led a team of 8 engineers building a self-service developer portal aligned with healthcare quality management processes, serving 800+ registered users, 30 partners, and 300 published catalog items.
- Designed and implemented a content management web application on an API-driven serverless architecture with containerized services, supporting over a dozen of technical writer teams.
- Architected cloud infrastructure following AWS Well-Architected best practices, with templated build and release automation that reduced deployment time by 80%.

  Tech: AWS (Lambda, API Gateway, Step Functions, ECS/EKS, S3, RDS, Redshift, CloudFront, Cognito), Terraform, CloudFormation, Python, Node.js, Angular, Drupal, Apigee, Docker, Kubernetes

TSRI, Kirkland, WA — Jan 2016 – Dec 2017
Software Engineer

- Built a cloud infrastructure pipeline for Java-based web applications on AWS (Python, Maven, Gradle) and developed a full-stack document auditing application (Java, Tomcat, Node.js, Angular, PostgreSQL, MySQL).
- Developed backend services for source code transformation (Java, C++, ANTLR).

Earlier: Software Engineer, Tyemill (Jun – Sep 2015) — backend services for a financial portfolio management web app (Ruby, Heroku).

SKILLS

Languages: Go, Python, Java, TypeScript/JavaScript, SQL
Cloud & Infrastructure: AWS, GCP, Kubernetes, Docker, Terraform, CloudFormation
Frameworks: Node.js, Angular, Apache, Hertz, Kitex
Data: PostgreSQL, MySQL, NoSQL, Redshift
Practices: Microservices, serverless, web applications, infrastructure as code, site reliability, AI integration, Agile/Scrum, SDLC

EDUCATION

University of Washington — M.S. in Computer Science
University of Washington — B.S. in Mathematics

Languages: French (native)
